

# Battery Charger/Analyzer

## Model DC202A

### CAPABILITY

Capable of charging and discharging one individual cell or a complete battery at any of the manufacturer's specified rates. At its maximum it is capable of charging six batteries and discharging twelve batteries in a standard 24 hour period. The analyzer section, graphically records the discharge capacitance of the battery and its individual cells, and even shows to the minute when a cell falls off the line.

### PERFORMANCE

INPUT: 110/220 VAC and 50/60 Cycle  
3 wire standard electrical code which is grounded to the panel, chassis and cabinet internally.  
It is suggested that the unit be grounded separately, externally.

OUTPUT: 0 - 25 AMPS DC and 0 - 35 Volts DC

SPECIAL FEATURES: Recording Voltmeter  
Capable of charging single cells in or out of battery  
Capable of charging **one battery** and discharging another battery at the same time  
User can calibrate in field  
Cost is less than other chargers
