

# Battery Charger/Analyzer

## Model DC402A

### CAPABILITY

Capable of charging from one cell to **two** complete batteries and, at the same time, can be discharging one individual cell to one complete battery at any of the manufacture's specified rates. At its maximum it is capable of charging batteries and discharging twelve batteries in a standard 24 hour period. The analyzer section, graphically records the discharge capacitance of the battery and its individual cells, and even shows to the minute when a cell falls off the line. Capable of charging **two main ship batteries** and discharging another battery at the same time

### PERFORMANCE

INPUT: 110/220 VAC and 50/60 Cycle  
3 wire standard electrical code which is grounded to the panel, chassis and cabinet internally.  
It is suggested that the unit be grounded separately, externally.

OUTPUT: 0 - 25 AMPS DC and 0 - 70 Volts DC

SPECIAL FEATURES: Recording Voltmeter
